DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claim 22 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The specification does not adequately disclose the liquid coating ***vaporizing while the coating engages the balloon*** wall as recited in lines 7 & 8 of claim 22.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 15 and 18-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lafontaine (US 5868735) further in view of Lehmann et al. '019. Lafontaine disclose a method for treating a blood vessel comprising introducing a catheter into the blood vessel, expanding a balloon of the catheter to engage the vessel wall and

expanding fluid at a first location. Lafontaine. teach all of the limitations of the claims except expanding a fluid at a second location. Lehmann et al. disclose a similar method and teach that it is old and well known to expand a fluid in multiple locations within the device (see figure 25) to allow greater aggregate cooling. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to provide a second fluid injection member on the Lafontaine device to provide a means of allowing greater aggregate cooling.

Response to Arguments

Applicant's arguments with respect to claims 15 and 18-22 have been considered but are moot in view of the new ground(s) of rejection.

Regarding the arguments pertaining to the rejections under 35 U.S.C 112 first paragraph, Applicant has not shown an adequate disclosure of the coating vaporizing while it engages the balloon.
